On May 9, 2003 this sequence version replaced gi:24819560.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Aclas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold') within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.                                                                                                                                                                                                                                                                                                                                                     arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Example 10; Fig 9; 120pp; English.

fragments which are capable of modulating an immune response observed with airway hyperresponsiveness and/or bronchalveolar manifestations of asthma. Also included are a method for modulating an immune response of an individual comprising modulating a gene comprising a mucleic acid at least functionally equivalent to a nucleic acid identifiable by a signature sequence (5S) given in the specification such as R1-SO-R1-A11, StO1-A12, and R1-SO-R1-B7, a substance (for use as a medicament) capable of modulating a gene comprising a nucleic acid at least functionally equivalent to a nucleic acid identifiable by SS and the use of a proteinaceous substance derived from a nucleic acid at least functionally equivalent to a nucleic acid identifiable by SS and the use of a proteinaceous substance derived from a nucleic acid at least functionally equivalent to a nucleic acid identifiable by SS for the production of an antagonist (for use as a medicament) against the production of an antagonist and substance are useful for the treatment of an immune response observed with airway hyperresponsiveness and/or bronchoalveolar manifestations of asthma. The method is useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1182
modulating the above immune response, where the gene encodes a gene product capable of modulating the immune response. The substance is useful for treating an immune response, particularly asthma, chronic obstructive pulmonary disease (copp), allorgic diseases (thinitis, atopic dermatitis, utricaria), autoimmune diseases (e.g. multiple sclerosis), inflammatory bowel disease, allograft rejection and infectious disease. The present sequence is a genomic DNA sequence (Contig 1A) comprising part of the gene sequence of DC-SIGN (a signature sequence also known as Ots1-B7)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         945

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents cosmid CVO14, which contains the rat vasopressin and oxytocin locus. The specification describes 5'OT-EST (oxytoxin expressed sequence tag) polypeptides. The 5'-OT EST gene is involved in the control of obsestry and fertility in males. 5'-OT EST animals created serve as a model for human late onset obesity and other related disorders and are also used for identifying the genetic cause of obesity. Compounds which modulate 5'-OT EST expression or activity are useful in the treatment or modulation of late onset visceral obesity or male infertility particularly in the disorders related to these conditions such as wasting, or anorexia, or cachexia associated with prolonged illness, or malabsorptive states or catabolic states associated with other diseases such as inflammatory conditions, Crohn's disease or AIDS wasting, or burns, or cancer, or bone disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           411

This sequence represents a fragment of the genomic sequence containing the coding region for the mouse WRN gene (AAX83004). The corresponding human gene (AAX83001) encodes a protein related to Werner's syndrome. The products can be used for the detection and treatment of Werner's syndrome (WS), an autosomal recessive disorder with a complex phenotype, as well as related diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TGAGAATTATCAATGAGCAGTGTTTGTGGATTCTTGTTATCTTGCACTTGTGAAGTGTGT

                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid molecule (I) encoding a Can 1 polypeptide. The Can 1 nucleic acid molecule is used to diagnose or treat infertility or premature ovarian failure or Sertoli Cell only syndrome in a mammal. The present sequence is that of a mouse Can 1 encoding sequence is not given in the printed specification. Note: The present through the GenBank reference AC083815
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18;

The invention relates to a nucleic acid molecule (I) encoding a Can 1 polypeptide. The Can 1 nucleic acid molecule is used to diagnose or treat infertility or premature ovarian failure or Sertoli Cell only syndrome in a mammal. The present sequence is that of a mouse Can 1 encoding chromosome 11 BAC clone RP23-77018 of the invention. Note: The present sequence is not given in the printed specification but was obtained through the GenBank reference AC083815 in treating Sequence 173810 BP; 50474 A; 33519 C; 33994 G; 55823 T; 0 U; 0 Other; Length 173810;

Predicting a toxic effect of a compound, useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays, comprises preparing gene expression profile of tissue or cells exposed to the compound.

Claim 1; SEQ ID NO 2986; 1156pp; English.

The present invention relates to a method for predicting a toxic effect
of a compound. The method comprises preparing a gene expression profile
of a tissue or cell sample exposed to the compound, and comparing the
gene expression profile to a database computal, and comparing the
of differential expression of the gene indicates at least one toxic effect.
The method is useful for predicting at least one toxic effect.
The method is useful for predicting at least one toxic effect.
Compound, predicting hepatotoxicity or the progression of a toxic effect.
Compound, identifying an agent that modulates the onset or
progression of a toxic response, predicting the cellular pathways that a
compound modulates in a cell, and identifying an agent that modulates at
compound anothales in a cell, and identifying an agent that modulates at
compound activity of a protein. The method and compositions of the
present invention using a database of genes having liver toxin-induced
differential expression, are useful in identifying toxicity markers in
compounded at for this patent did not form part of the printed
sequence data for this patent did not form part of the printed
cat ftp.wipo.int/pub/published\_pct\_sequences.

The compound modulates in electronic format directly from Wipo

                                                                                                                                                                                     The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                    Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3215 GGTGGTCCGATAGCACGCATGGGATTATTTCTATCTTTCTGTACCTGTTGAGGCCCGTTT

recombinant nucleic acid encoding carcinoma associated protein, ul for preparing compositions for treating carcinomas.

Claim 1; SEQ ID NO 1145; 245pp; English.

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host calls comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a blochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism or a random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host of pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host correctionma (especially breast cancer, prostate cancer, lymphoma or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene or by determination of CA gene or by general sequence and in screening and evaluating drug candidates. The consequence of the invention. Note: The complete sequence dit here invention. Note: The complete sequence dit comma directly from MIPO at the printed specification, but was obtained to half-which inthication of the major of the major of the printed specification, but was obtained to be a consequence of the printed specification. ftp.wipo.int/pub/published\_pct\_sequences

                                                                           2061
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         activity, and may have a use in gene therapy, or in a vaccine. The recombinant mucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant nucleic acid, useful for treating carcinomas, lymphomas, cancers, neoplasm, adenocarcinoma, or sarcomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 47115 BP; 11483 A; 10181 C; 10540 G; 13012 T; 0 U; 1899 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        rrrcrrrrrrrrrcrrccrrcaccaagrrarcarraagagagcarrgrrcagcrrcr

The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to crecombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a bhochip comprising CA nucleic acid or CA nucleic acid or carcinoma bhochip comprising CA nucleic acid or coopenic retroviruses, which insert into the genome of the host organism or random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host correspond (especially breast cancer, prostate cancer, lymphoma or carcinoma (especially breast cancer, prostate cancer, lymphoma or carcinoma (especially breast cancer, prostate cancer, lymphoma or the sequence of the acids, proteins and antibodies are also useful as therespeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed murine CA nucleic acid sequence of the invention. Note: The complete sequence data for this capent did not forma part of the printed specification, but was obtained control format directly from WIPO at the printed specification, but was obtained control format directly from WIPO at the printed specification, but was obtained control format directly from WIPO at the printed specification. 51244 51304 51364 51598 51424 51483 21; 344 404 464 522 697 757 Seguence 96597 BP; 25792 A; 20376 C; 20447 G; 28650 T; 0 U; 1332 Other; 51129 AAAGTTTTTAATTTCTTTATTTCTTCATTGAGCAAGTTATCATTGAGTAGAGCGTTGTTC 51365 AAGGIACATICATITIGCITITAGGAIGAATGITICIATAAATAATCIGCIAAACCCITTA 51425 GGTTCTTAACTTCTATTAGTTTTCACTGTCTCTCTTTTAG-TTTCTGTTTTCATAATCTG sıs44 deririgader----raadrirererrahdecangidrerreeridearirideadead 285 AAACACTICIAITICIIGAITICIAICIIAGCICATITITIAACICAGIAGIGAGIIGITI 51245 Acreenidationicadiadoarecardoaritatiricaarericingiareridade CTTGCTTTGTTTTTGAATATGTATTCAATTTTGGAGA--GTTTCATAGGGTGCTGACAAG 51305 cerentrigiaaccaaraarareereacririseacaaceraceareacarecare AAGGTACAGTCTTTGTGTTTT--GGTGAAATAGTCTGTAAATA--TCTCTAGGTCCACTT 698 GAITTTAGCTGTAGCTGTGTTTTTATGAACTTGGGTGACATTGTGTTTTGGTGCATAG 51189 AGCTICCATGIGIATGIGIGCTITCCCTIGIT----TICTIGGIATIGAAGACCGGCTTI AAGCTGTGGTGGTCAGATAGGACATAGAGTATTATTTCAATTGTCTTTTATCTGTCGAGA 758 ACATTAAGAATTGCAATGTCCTCTTCGTGGA-TTTTCCTTTGATGCCTATGTAGTATTCT 345 GGTTTCCATAAGTTTGTAAGTTTTCTGTTGTTTCTGTTGTTGTTGTTGTTATTAGATTT 556; Indels 147; Gaps protein, Length 96597; New recombinant nucleic acid encoding carcinoma associated useful for preparing compositions for treating carcinomas. A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polympetides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcommas. The present sequence represents a mouse gene of the invention.

The corresponding human gene (AAX83001) encodes a protein related to Werner's syndrome. The products can be used for the detection and treatment of Werner's syndrome (WS), an autosomal recessive disorder with a complex phenotype, as well as related diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     940
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 648
                                                                                                                                                                    Isolated nucleic acid molecule encoding the WRN gene product - useful for detection and treatment of Werner's syndrome, and related diseases.

Identifying analytes that modulate expression of a reporter sequence mediated by human or mouse transcription control elements in transgenic rodent, comprises administering the analyte and monitoring expression of coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of identifying an analyte that modulates expression of a reporter sequence mediated by transcription control elements derived from a human CYP3A4 gene, in a transgenic, living rodent. The method involves administering the analyte to the rodent and monitoring expression of the sequence of interest where an effect on expression indicates that the analyte affects the expression that reporter sequence. The method is useful for identifying an analyte that modulates expression of a reporter sequence and in isolating and identifying mouse and human transcriptional control elements associated with cytochrome expression e.g. Cyp3A11 and CYP3A4 respectively. The cells and transgenic animals containing the expression cassette may be used as models for studies involving toxicity and drug metabolism. The present sequence is mouse Cyp3A11 gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2738 regreterricaaetrereceaeratrarrerereaegecaarererererererezen 2797
                                         Identifying analytes that modulate expression of a reporter sequence mediated by human or mouse transcription control elements in transgenic rodent, comprises administering the analyte and monitoring expression of
                                                                                                                                                                                                                      The invention relates to a method of identifying an analyte that modulates expression of a reporter sequence mediated by transcription control elements derived from a human CY3A4 gane, in a transgenic, living rodent. The method involves administering the analyte to the rodent and monitoring expression of the sequence of interest where an effect on expression indicates that the analyte affects the expression of the reporter sequence. The method is useful for identifying an analyte that modulates expression of a reporter sequence and in isolating and identifying mouse and human transcriptional control elements associated with cytochrome expression e.g. Cyp3A11 and CyP3A4 respectively. The cells and transgenic animals containing the expression casette may be used as models for studies involving toxicity and drug metabolism. The present sequence is mouse Cyp3A11 promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3038 TTTTTCCCTGAGATGGGTTTCCTGTAAGCAGCAGAATGTTGGGTCCTGTTTGTGTAGCCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1294 irdangagricageringgigaariririceiringargaarargaagigiceringerraterr 1353
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1233
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAF92502 to AAF92572 represent nucleic acids which encode taste transduction G-protein coupled receptors designated T2R proteins. AAB97731 to AAB9734 represent T2R proteins, and AAB97825 to AAB9730 represent T2R family consensus sequences from the present invention. The T2R proteins are taste modulators. The nucleic acids are useful as probes for the identification of taste cells, as the nucleic acids are specifically expressed in taste cells. They also serve as tools for the generation of taste topographic maps that elucidate the relationship to taste centres in the brain. The taste modulators are useful for pharmacological and genetic modulation of taste signalling pathways. Modulatory compounds comprising T2R proteins can therefore be used in decrease the bitter taste of food or drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              648

binds to the protein, and a biochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using on cogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host organism car random. Many of these do not carry transduced host organism component trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protooncogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The present sequence of the invention. Note: The complete sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from MIPPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14635
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14395
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14754
